

## Reference group TMA4275 Spring 2020

Meeting 1: 23.01.2020. Participants: Clara, Helene, Bo

Some important points from the meeting:

- Slides with lots of information work well
- Lecturer should do calculations also on the board in order to enhance the learning (it is not so easy to follow long arguments on slides only)
- Lecturer is sometimes too slow in the presentation, for example uses too long time on some examples
- The students want to have examples also using R, in addition to MINITAB
- *Lecturer:* A positive point of using MINITAB is that this kind of statistical packages are used in many types of jobs in industries (while R and Latex are mostly used at universities)
- The time for the exercise meetings should preferably be changed
- Obligatory I should change dates to: Out Wedn. February 12, In Wedn. February 26
